

Eidoo Tutorial to participate on the AidCoin ICO starting January 16th, 2018 12:00 CET

Disclaimer: We publish the following instructions only as guidance on one of the ERC20 wallet option for the ICO. Participants are advised to conduct their own research and not rely solely on material we are presenting. We make no representations or warranties that the following material is complete or accurate, or that Eidoo (or any associated software or services) will be reliable or function as described. As such, contributors assume all risks associated with the use of Eidoo (or any other ERC20 wallet) in connection with the ICO.

Please note that participants can use any Ethereum wallet of which they control the private keys. A list of recommended wallets can be found at <https://www.aidcoin.co/faq>

In this tutorial, you'll learn how to manually send a transaction during the ICO using Eidoo.

Step 1: Download the Eidoo app and create an Ethereum wallet

When you download the app for the first time, you will be asked to follow a wizard with basic information related to the Eidoo wallet. Please read all info carefully.

Then, a new page will appear. Click on "Create a new Wallet" to create a new address.

Terms and Conditions will be shown for you to read. Please, read them carefully and then click on the grey button "I agree, go next."

This new page will appear. Here you need to set a password to control the access to your wallet. You must remember it because you won't be able to reset or recover it.

After entering your password, you have to backup your wallet. This backup phrase will protect your funds and can be used to restore your digital currencies and tokens if your device will be lost or damaged, or if you forget the password.

To make this backup, you will only need to write down on paper a 12-word set and store it in a safe place.

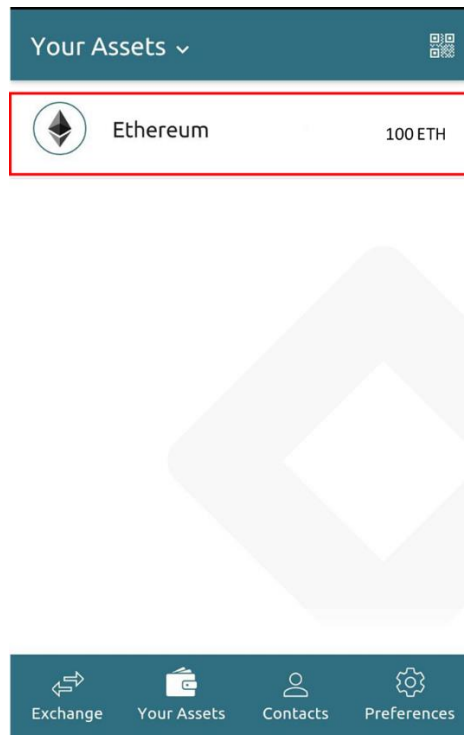

We suggest to store it in a safe place, and not to keep this backup phrase on your device.

A list of 12 words will appear in the language of your phone, and then you will be asked to write them in the right order for the "Verification Time" to complete the backup process.

Once you will successfully end the process, the following message will appear on your device.

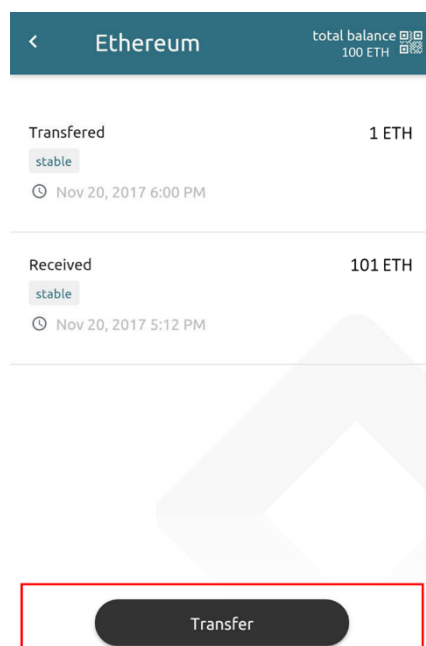

Step 2: Log in on the Eidoo app and select your Ethereum wallet

Click on the Ethereum symbol to open your wallet

Step 3: The transaction

After you have opened your wallet, you need to click on "Transfer"

You will then need to write the address you will see on the AidCoin Website, in the "Address" field. After filling the address, you will need to pick the ETH amount you want to send. Please note that the max contribution is 5 ETH. After filling the two fields, you will need to click on "Advanced"
