

MyEtherWallet Tutorial to participate on the AidCoin ICO starting January 16th, 2018 12:00 CET

Disclaimer: We publish the following instructions only as guidance on one of the ERC20 wallet option for the ICO. Participants are advised to conduct their own research and not rely solely on material we are presenting. We make no representations or warranties that the following material is complete or accurate, or that MyEtherWallet (or any associated software or services) will be reliable or function as described. As such, contributors assume all risks associated with the use of MyEtherWallet (or any other ERC20 wallet) in connection with the ICO.

Please note that participants can use any Ethereum wallet of which they control the private keys. A list of recommended wallets can be found at <https://www.aidcoin.co/faq>

Getting Started

In this tutorial, you'll learn how to manually send a transaction during the ICO using MyEtherWallet, which is one of the most popular Ethereum Wallets.

Step One: Generating wallet

Open your web browser and navigate to <https://myetherwallet.com>. Create a secure password on this screen. Click Generate Wallet to create your wallet:

Step Two: Saving your wallet file

Click **Download** and save the file on your hard drive. Then click **Continue** to agree not to lose the file. Locate the folder you saved your wallet file in. Duplicate the wallet file and store the duplicate in a secure separate location. You must have access to this file and your **password** to access your account. If you lose these, there will be no way to access your account again.

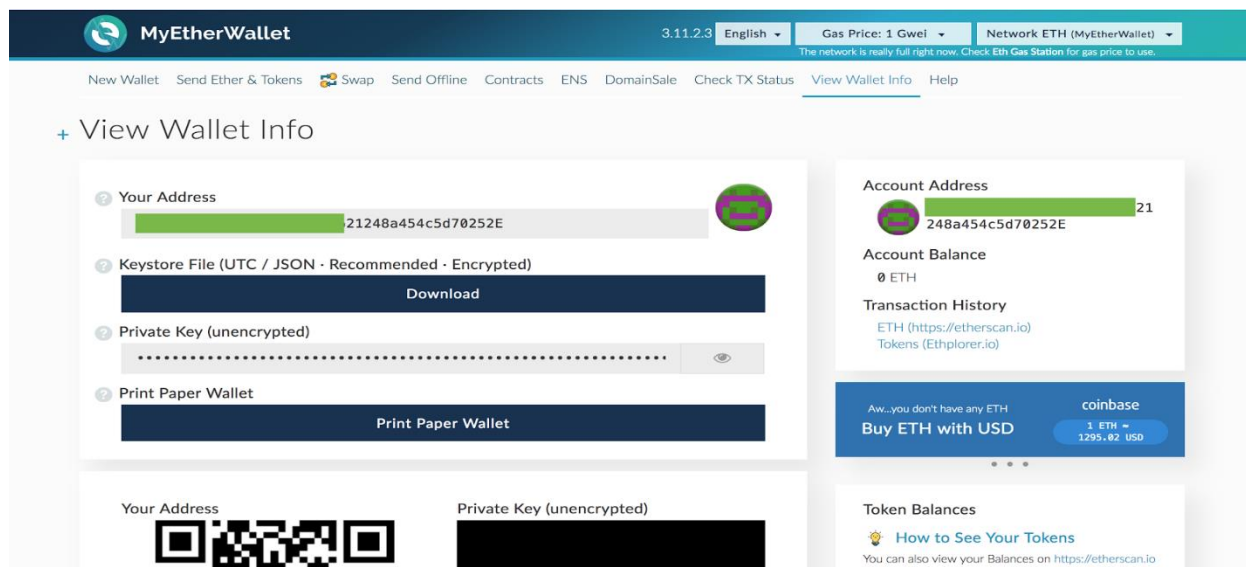

The screenshot shows the MyEtherWallet interface. At the top, there's a red warning bar: "DON'T GET PHISHED, please! Thank you! 1. BOOKMARK MYETHERWALLET.COM 2. INSTALL EAL or MetaMask or Cryptonite". Below this is the header with the MyEtherWallet logo, version 3.11.2.3, language set to English, gas price at 1 Gwei, and network set to ETH. The main navigation bar includes links like New Wallet, Send Ether & Tokens, Swap, Send Offline, Contracts, ENS, DomainSale, Check TX Status, View Wallet Info, and Help. The central content area is titled "Save your Keystore File." and features a blue button labeled "Download Keystore File (UTC / JSON)". Below the button, there are three lines of warning text: "**Do not lose it!** It cannot be recovered if you lose it.", "**Do not share it!** Your funds will be stolen if you use this file on a malicious/phishing site.", and "**Make a backup!** Secure it like the millions of dollars it may one day be worth." At the bottom of this section is a red button that says "I understand. Continue.". On the right side, there's a sidebar with the heading "Not Downloading a File?" and a list of tips: "Try using Google Chrome", "Right click & save file as.", and a filename field containing "UTC--2018-01-14T17-". Below this is another section "Don't open this file on your computer" with a tip: "Use it to unlock your wallet via MyEtherWallet (or Mist, Geth, Parity and other wallet clients.)". At the bottom of the sidebar is a "Guides & FAQ" section with links to "How to Back Up Your Keystore File" and "What are these Different Formats?".

Step Three: Obtaining Ether and Funding the Account

Utilize one of the reputable cryptocurrency exchanges to purchase Ether (such as: <https://www.coinbase.com/>, <https://www.kraken.com/> or <https://poloniex.com/>). If you store your Ether on an exchange you can send it to the **address** just created. You will need to factor in a small amount of Gas (a transaction fee for miners) to compensate for the fees associated. Once you've obtained your Ether, send the **amount** you want to the **address** just created. You will need to unlock your wallet again, to send Ether to the address just created. Click on the **View Wallet Info** tab. Open the file you just saved and backed up by entering your **password**.

The screenshot shows the MyEtherWallet interface with the "View Wallet Info" tab selected. The header and navigation bar are the same as in the previous screenshot. The main content area is titled "View Wallet Info" and includes a sub-header: "This allows you to download different versions of private keys and re-print your paper wallet. You may want to do this in order to import your account into Geth/Mist. If you want to check your balance, we recommend using a blockchain explorer like etherscan.io." Below this, there are two main sections. The first is "How would you like to access your wallet?" with a list of radio button options: "View w/ Address Only", "MetaMask / Mist", "Ledger Wallet", "TREZOR", "Digital Bitbox", "Keystore / JSON File" (which is selected), "Mnemonic Phrase", "Private Key", and "Parity Phrase". The second section is "Select Your Wallet File" with a red warning icon and text: "This is not a recommended way to access your wallet. Entering your private key on a website dangerous. If our website is compromised or you accidentally visit a different website, your funds will be stolen. Please consider:" followed by a list of bullet points: "MetaMask or A Hardware Wallet or Running MEW Offline & Locally" and "Learning How to Protect Yourself and Your Funds". Below this is a note: "If you must, please double-check the URL & SSL cert. It should say https://www.myetherwallet.com & MYETHERWALLET LLC [US] in your URL bar." At the bottom of this section is a grey button labeled "SELECT WALLET FILE...". Below that is a text input field with a placeholder "Your wallet is encrypted. Good! Please enter the password." and a green "Unlock" button.

Once unlocked, you can send from an exchange or other wallet using the address from Your Address or the address from Your Address QR Code:

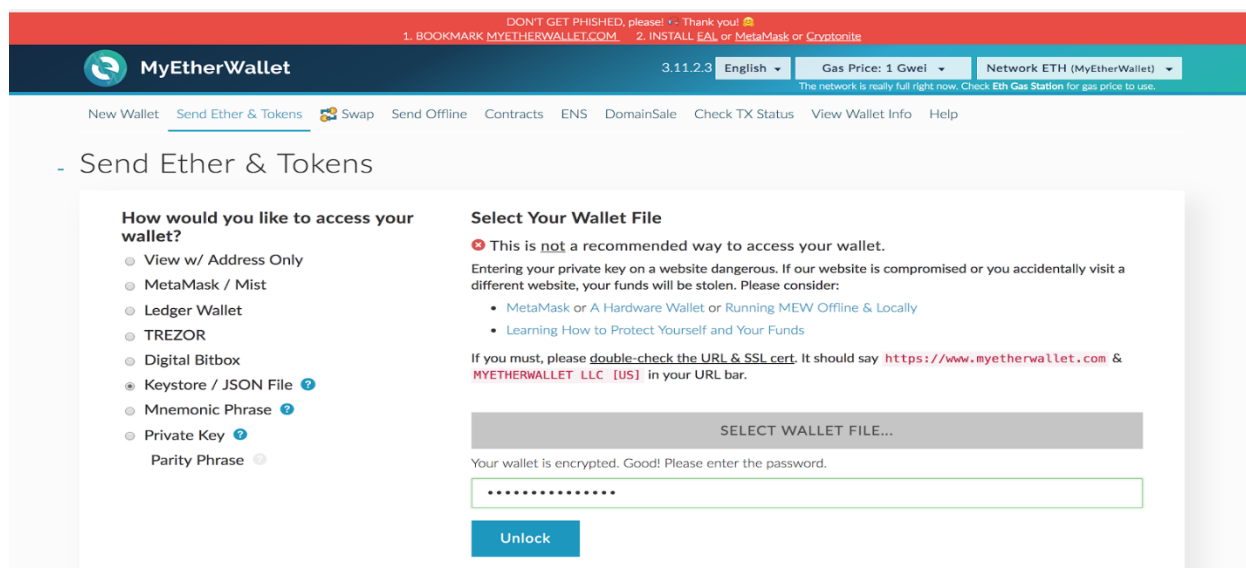

Your wallet is now *funded*.

Step Four: Verifying the AidCoin\ ICO Address

Navigate to <https://www.aidcoin.co> and copy the Smart Contract Address.

Step Five: Sending ETH

Navigate back to the web browser tab with MyEtherWallet. Click on the Send Ether & Tokens tab. Click Select Wallet File... . Browse to where you stored the files in the previous steps. Open your wallet file. Enter your Password and click Unlock.

Copy the Contract Address found on: <https://www.aidcoin.co>. Paste the address into the To Address field in MyEtherWallet.

Insert the Amount To Send field with the amount of *Ether* you wish to send. In the Gas Limit field, input 250,000.

Note: The Gas Limit is important because the smart contract requires more gas than a normal transaction.

The Gas Fee slider is located in the header (the top right-hand corner) of the MyEtherWallet website. For the AidCoin ICO, there is no maximum Gas Fee. Set the Gas Fee slider to your desired amount.

Note: You can only participate to the ICO from January 16, 2017, 12:00 CET until February 1, 2017, 12:00 CET or when the cap is reached.

Aw...you don't have any ETH
Buy ETH with USD [coinbase](#)
1 ETH = 1303.51 USD

Click Yes, I am sure! Make transaction.

You are about to send...

5 ETH

To Address: C8D3Efd9451acEc47
From Address: 21248a454c5d70252E

Amount to Send: 5 ETH
Account Balance: 0
Coin: ETH
Network: ETH by MyEtherWallet
Gas Limit: 250000
Gas Price: 1 Gwei (0.00000001 ETH)
Max TX Fee: 0.00025 ETH (250000 Gwei)
Nonce: 0
Data: (none)

You are about to send 5 ETH to address C8D3Efd9451acEc47.

Are you sure you want to do this?

No, get me out of here! Yes, I am sure! Make transaction.

The network is a bit overloaded. If you're having issues with TXs, please read me.

Step Six: Confirming that the transaction was completed

At the bottom of the screen, a notification bar pops up. Click **View TX**. An Etherscan window showing your transaction will open. If there are no **errors** indicated in red, then your transaction was successfully.

Note: AID shall be transferred to your address shortly after the transaction is confirmed.

Where to go from here?

To add your AID Tokens, please check information [here](#). During the ICO, if you have questions, you can ask them in the [Telegram group](#). Check out AidCoin on [Telegram channel](#), [Medium](#), [Twitter](#) and [Facebook](#).

Thank you for participating!
