

MyEtherWallet Tutorial to participate on the AidCoin ICO starting January 16th, 2018 12:00 CET

Disclaimer: We publish the following instructions only as guidance on one of the ERC20 wallet option for the ICO. Participants are advised to conduct their own research and not rely solely on material we are presenting. We make no representations or warranties that the following material is complete or accurate, or that MyEtherWallet (or any associated software or services) will be reliable or function as described. As such, contributors assume all risks associated with the use of MyEtherWallet (or any other ERC20 wallet) in connection with the ICO.

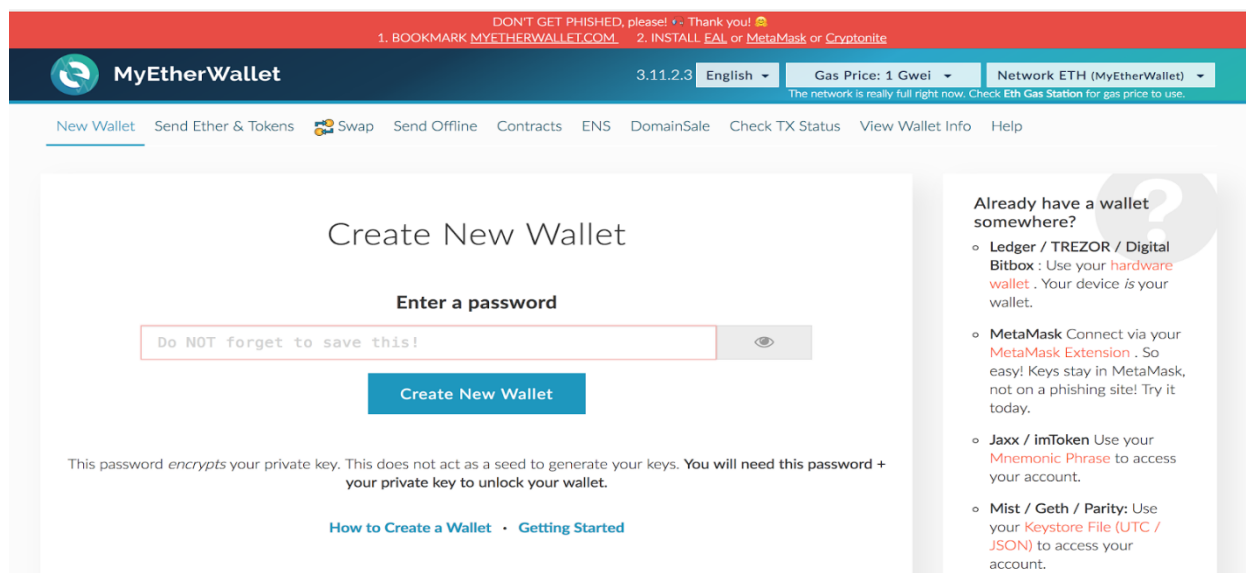

Please note that participants can use any Ethereum wallet of which they control the private keys. A list of recommended wallets can be found at <https://www.aidcoin.co/faq>

Getting Started

In this tutorial, you'll learn how to manually send a transaction during the ICO using MyEtherWallet, which is one of the most popular Ethereum Wallets.

Step One: Generating wallet

Open your web browser and navigate to <https://myetherwallet.com>. Create a secure password on this screen. Click Generate Wallet to create your wallet:

DON'T GET PHISHED, please! - Thank you! 🙏
1. BOOKMARK MYETHERWALLET.COM. 2. INSTALL EAL or MetaMask or Cryptonite

MyEtherWallet 3.11.2.3 English Gas Price: 1 Gwei Network ETH (MyEtherWallet)
The network is really full right now. Check Eth Gas Station for gas price to use.

Create New Wallet

Enter a password

Do NOT forget to save this!

Create New Wallet

This password *encrypts* your private key. This does not act as a seed to generate your keys. **You will need this password + your private key to unlock your wallet.**

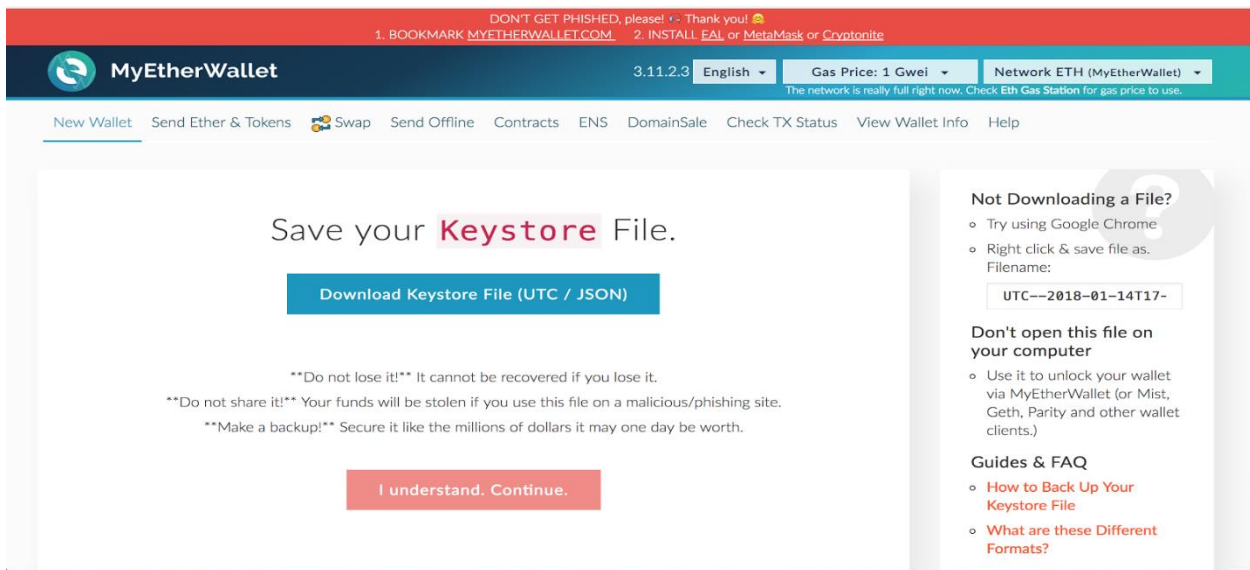

[How to Create a Wallet](#) · [Getting Started](#)

Already have a wallet somewhere?

- **Ledger / TREZOR / Digital Bitbox** : Use your **hardware wallet** . Your device *is* your wallet.
- **MetaMask** Connect via your **MetaMask Extension** . So easy! Keys stay in MetaMask, not on a phishing site! Try it today.
- **Jaxx / imToken** Use your **Mnemonic Phrase** to access your account.
- **Mist / Geth / Parity**: Use your **Keystore File (UTC / JSON)** to access your account.

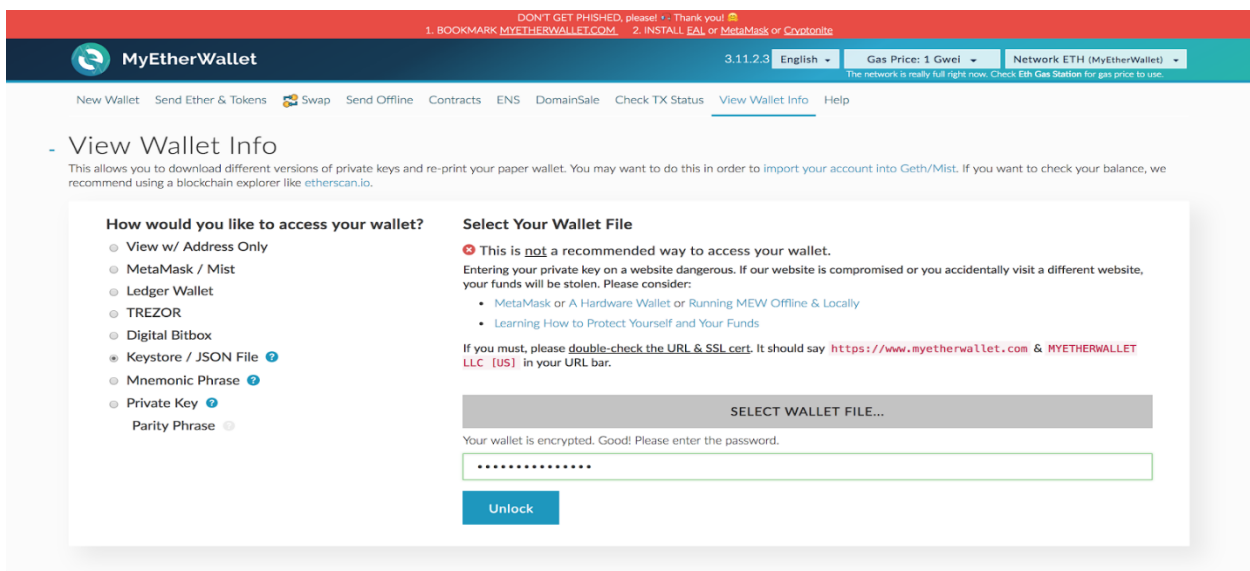

Step Two: Saving your wallet file

Click **Download** and save the file on your hard drive. Then click **Continue** to agree not to lose the file. Locate the folder you saved your wallet file in. Duplicate the wallet file and store the duplicate in a secure separate location. You must have access to this file and your **password** to access your account. If you lose these, there will be no way to access your account again.

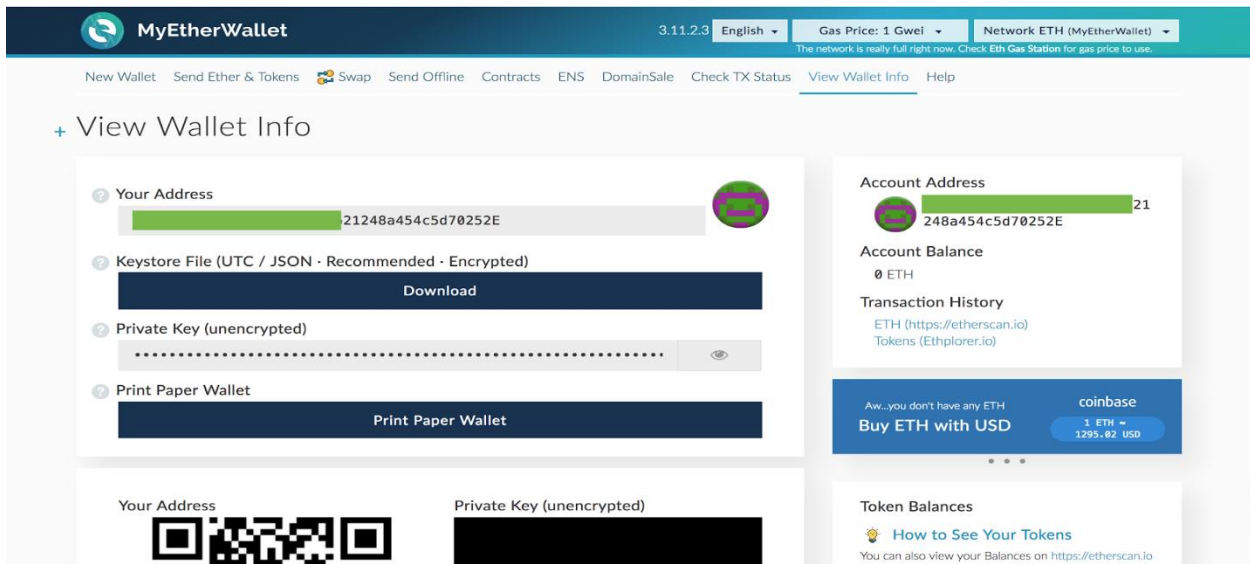

Step Three: Obtaining Ether and Funding the Account

Utilize one of the reputable cryptocurrency exchanges to purchase Ether (such as: <https://www.coinbase.com/>, <https://www.kraken.com/> or <https://poloniex.com/>). If you store your Ether on an exchange you can send it to the **address** just created. You will need to factor in a small amount of Gas (a transaction fee for miners) to compensate for the fees associated. Once you've obtained your Ether, send the **amount** you want to the **address** just created. You will need to unlock your wallet again, to send Ether to the address just created. Click on the **View Wallet Info** tab. Open the file you just saved and backed up by entering your **password**.

Once unlocked, you can send from an exchange or other wallet using the address from Your Address or the address from Your Address QR Code:

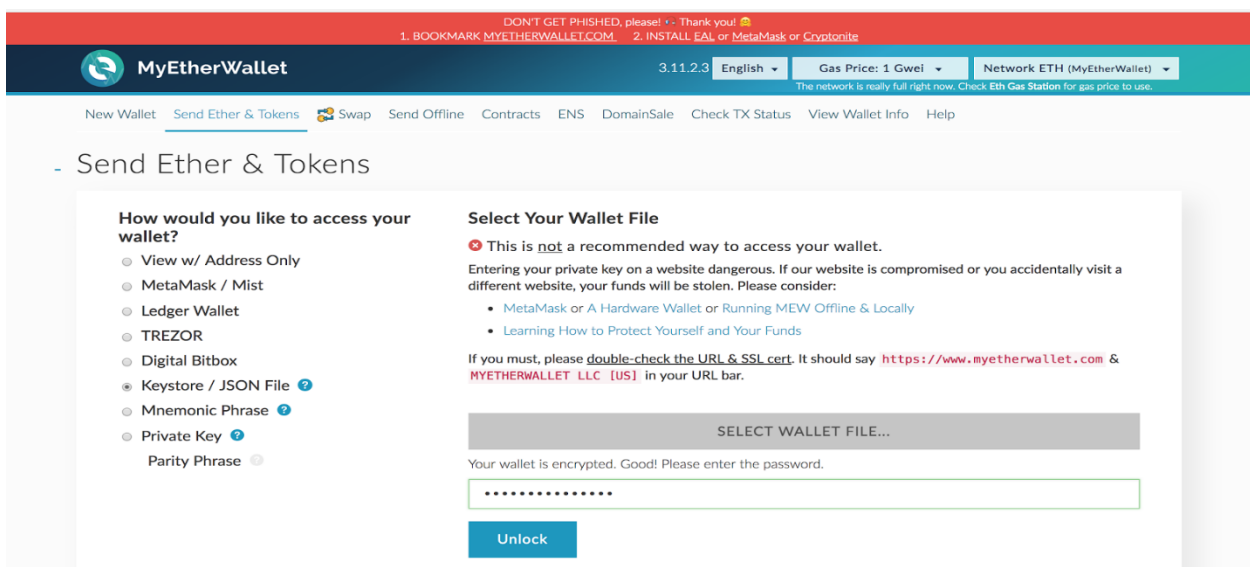

Your wallet is now *funded*.

Step Four: Verifying the AidCoin\ ICO Address

Navigate to <https://www.aidcoin.co> and copy the Smart Contract Address.

Step Five: Sending ETH

Navigate back to the web browser tab with MyEtherWallet. Click on the Send Ether & Tokens tab. Click Select Wallet File... . Browse to where you stored the files in the previous steps. Open your wallet file. Enter your Password and click Unlock.

Copy the Contract Address found on: <https://www.aidcoin.co>. Paste the address into the To Address field in MyEtherWallet. Insert the Amount To Send field with the amount of *Ether* you wish to send. In the Gas Limit field, input 250,000.

Note: The Gas Limit is important because the smart contract requires more gas than a normal transaction.

The Gas Fee slider is located in the header (the top right-hand corner) of the MyEtherWallet website. For the AidCoin ICO, there is no maximum Gas Fee. Set the Gas Fee slider to your desired amount.

Note: You can only participate to the ICO from January 16, 2017, 12:00 CET until February 1, 2017, 12:00 CET or when the cap is reached.

The screenshot shows the MyEtherWallet website interface. At the top, there's a red banner with a warning: "DON'T GET PHISHED, please! :- Thank you! :)". Below it, instructions to bookmark the site and install EAL or MetaMask are visible. The main header includes the MyEtherWallet logo, version 3.11.2.3, language set to English, gas price of 1 Gwei, and network set to ETH (MyEtherWallet). A navigation bar contains links like New Wallet, Send Ether & Tokens, Swap, Send Offline, Contracts, ENS, DomainSale, Check TX Status, View Wallet Info, and Help. The 'Send Ether & Tokens' section is active, showing a form to send 5 ETH to a specific address. The gas limit is set to 250000. On the right, the account address is 21248a454c5d70252E, and the balance is 0 ETH. A transaction history section shows recent activity. At the bottom right, there's a 'Buy ETH with USD' button with a Coinbase logo and a price of 1 ETH = 1303.51 USD. A 'Generate Transaction' button is at the bottom of the form.

Click Yes, I am sure! Make transaction.

This screenshot shows a confirmation dialog box titled "You are about to send...". It displays the transaction details: sending 5 ETH from the account address 21248a454c5d70252E to the recipient address 0x78f47f9e7088f8b55145248c8. The dialog also shows the network (ETH by MyEtherWallet), gas limit (250000), gas price (1 Gwei), and the maximum transaction fee (0.00025 ETH). A raw transaction JSON object is visible at the bottom left of the dialog. At the bottom, there are two buttons: "No, get me out of here!" and "Yes, I am sure! Make transaction.". A small note at the very bottom states: "The network is a bit overloaded. If you're having issues with TXs, please read me."

Step Six: Confirming that the transaction was completed

At the bottom of the screen, a notification bar pops up. Click **View TX**. An Etherscan window showing your transaction will open. If there are no **errors** indicated in red, then your transaction was successfully.

Note: AID shall be transferred to your address shortly after the transaction is confirmed.

Where to go from here?

To add your AID Tokens, please check information [here](#). During the ICO, if you have questions, you can ask them in the [Telegram group](#). Check out AidCoin on [Telegram channel](#), [Medium](#), [Twitter](#) and [Facebook](#).

Thank you for participating!
